

Ethical Statement on the Use of AI

At Wynne-Jones IP, we use artificial intelligence responsibly to support the delivery of patent, trade mark and other intellectual property services as required by our clients.

AI may assist with research, drafting and administrative tasks within our company, but it does not replace the expertise, professional judgement or accountability of our employees. All outputs from the use of AI based tools are checked by an appropriately qualified human within the company. Our substantive client legal work is reviewed by our appropriately qualified IP attorneys.

Specifically, we strictly prohibit the uploading of any non-public technical disclosure, draft legal specifications, or technical solutions provided by you to any publicly accessible AI service, for example, open web-based generative AI tools. These materials are processed solely through our internal, secured environments and are never exposed to external AI model training or data harvesting.

We are committed to maintaining the highest standards of confidentiality, data protection, accuracy, transparency and professional ethics in our use of AI.
